About Us

Eranyacloud is a Indonesian full service local cloud provider that was founded in 2019 under PT Era Awan Digital. Eranyacloud offers high performance, credible and reliable cloud computing services such as Public and Private Cloud, Cloud Backup Protection, Disaster Recovery, Virtual Security Operation Center (vSOC), Web Application Security (WAF), Email Collaboration, and Managed Services. Eranyacloud is Simple, Secure and Stable with 24/7 Support, located in a Tier 4 and Tier 3 data center.

We are committed to deliver 99.9% uptime Service Level Agreement (SLA) that gives you peace of mind. We are ready to assist you with your digital transformation.

Vision

To enhance a credible local cloud industry that continuously improves infrastructure technology by providing professional team with high integrity.

Mission

Solve

Deliver cloud service that give customer peace of mind knowing their data is secure by partnering with us.

Eligibility

Our service has world-class standard both from infrastructure technology and technical team behind the infrastructure

Responsibility

We are responsible to continually create innovation in terms of services and technology to gives customer satisfaction

Value

We are committed to gives the best value in terms of price and quality for our customers

Integrity

Eranyacloud is eager to keep customer trust by giving the best communication and negotiation to fulfill customer's needs.

Commitment

We committed to be agile and continuously grow in the dynamic change of technology and customer service

Excellence

We are constantly gives the best services and performances

Managed
services

Simple

Eranyacloud offers customers simple pricing in Indonesian currency, with free bandwidth to avoid any billshocks. We will provide you with our all in one dashboard for easy management and monitoring

Secure

Eranyacloud comes with the highest standard of cloud infrastructure security. We provide a full service infrastructure, a place to host and protect sensitive data in the cloud. Your infrastructure is hosted locally in a tier 4 data center.

Stable

Cloud computing operates like any other business, stability is a key. Eranyacloud's infrastructure is 100% independent, and we focus in delivering 99.9% SLA for our customers.

Support

Every element of our infrastructure is monitored around the clock by our internal Network Operations Center (NOC). Any malfunctions are immediately reported and managed by our dedicated professional team 24/7.

Our Products

Compute

Designed for running mission-critical workloads in the cloud

Simple and Intuitive

Eranyacloud platform provides an easy-to-use control panel and API Integration, which allows you to create and manage cloud environments hassle free.

Enterprise Infrastructure

High availability by design, Eranyacloud architecture is designed to be fully redundant with a backup server.

Advanced Networking

Eranyacloud's platform comes with advanced networking functionalities standards, including: VPCs, Security Groups, Elastic IP Addresses, and more. It's perfectly suited for both simple and sophisticated network topologies.

100% NVMe Storage

The underlying enterprise-grade storage infrastructure is built on all-flash, 100% NVMe-based disks for lightning-fast response times. In addition, the storage infrastructure is designed for maximum availability and business continuity.

Compliance and Security

Your data security is our priority, Eranyacloud provides world-class encryption without further need for configurations. Our Cloud Platform has completed ISO-27001 certification, demonstrating our commitment to information security.

Backup Protect & Disaster Recovery

Backup and Disaster Recovery enhanced with essential endpoint protection capabilities and a security management toolkit for centralized administration and monitoring.

Advanced Security

Enhance your security services with integrated cyber protection including full-stack anti-malware. Increase your detection rate and responsiveness to the latest cyberthreats.

Advanced Backup

Defend clients' data, even between scheduled backups. Extend backup capabilities to SAP HANA, Oracle DB, MariaDB, MySQL, and application clusters.

Advanced Data Loss Prevention (DLP)

Prevent leakage of sensitive data from client workloads via peripheral devices and network communications.

Advanced Management

Streamline vulnerability management and promptly close gaps in your clients' IT infrastructure through patch management.

Advanced Disaster Recovery

Make disaster recovery painless and increase efficiency with orchestration, runbooks, and automatic failover.

Active Protection & Report

Protection for backups and recovery. Forensics available and always active by default. Reporting and Logs are collected 24/7.

Kubernetes

With easy-to-use control panel and a powerful API our Kubernetes allows you to have easy to deploy, manageable, and scalable Kubernetes clusters on-demand. It comes with a cloud-native Kubernetes experience and full support for the Kubernetes-tools ecosystem.

Wizard-guided Provisioning

Thanks to wizard, our intuitive control panel, provisioning Kubernetes clusters couldn't be simpler.

Simple Management

Use predefined actions in the control panel to manage Kubernetes nodes including reboot, rebuild, cordon, drain.

One-click Cluster Scaling

Scale your clusters up or down with just one click, and Kubernetes logic will do the rest.

Native Kubernetes (K8s)

Use kubectl CLI, API, or any Kubernetes ecosystem tools that allows you to have a fully consistent user experience.

Healthy Monitoring

Eranyacloud continuously monitors the general health of your clusters, control plane (master node), and all worker nodes.

Object Storage

Scalable, high-performance and compatible with AWS S3

Highly Available

Highly available by design, the entire architecture is designed to be fully redundant with no single point of failure.

Security

Your data securely placed in Eranyacloud's Object Storage. Data transfer is secured with standard SSL (HTTPS).

Transparent Pricing

Simple and transparent pricing model.

S3 Compatible

Our API is S3-compatible, so you can reuse the existing ecosystem of S3 tools, utilities, plugins, extensions, and libraries - without any customization.

VPN Gateway

Platform cloud yang dapat mengakomodasi kebutuhan virtualisasi infrastruktur TI dan aplikasi berbentuk container

VPN Remote Access

Virtual Private Network as a Service (VPNaaS) is an advanced site-to-site solution which helps you to connect with different infrastructure types. It is fully integrated with self-service portal. Our VPN implementation utilized the Internet Key Exchange (IKE) and IP Security (IPsec) protocols to establish secure VPN connections and based on the strongSwan IPsec solution.

VPN Site-to-Site

Virtual Private Network as a Service (VPNaaS) is an advanced site-to-site solution which helps you to connect with different infrastructure types. It is fully integrated with self-service portal. Our VPN implementation utilized the Internet Key Exchange (IKE) and IP Security (IPsec) protocols to establish secure VPN connections and based on the strongSwan IPsec solution.

Our Services

Managed Service

Basic

Suitable for business that needs more resources for day-to-day infrastructure operations. For example, a new startup company. The service includes 24x7 support, provisioning, web service setup and database, Infrastructure monitoring with alerts (CPU, RAM, Disk, Network), 1 month log retention, monthly reporting on infrastructure with optimization recommendation

Advanced

Suitable for business that has concern on business application performance to achieve its customer satisfaction, such as e-commerce, travel and hospitality, FMCG, and logistics. Service includes basic package with extra application monitoring per instance and per app with alerts, web service and database tuning, and monthly application reporting and optimization recommendation

Enterprise

Suitable for companies that have concern on security compliance as well as the application performance, such as financial technology, banking, insurance, and telecommunication. Managed Service includes advanced package with extra monitoring application security per instance with alert, and monthly infrastructure application and security report with optimization recommendation.
